

SAFEGARD™ 2R CASEMENT WINDOW OPENING CONTROL DEVICE

The industry's first casement Window Opening Control Device. SafeGard™ provides peace of mind on casement window applications.

This innovative hardware system provides safe and secure operations of egress style windows critical in today's building projects. Multiple safe guards help prevent accidental falls while at the same time allowing easy operation in the event of an emergency. Typical operation limits the opening of the sash to less than 4". An additional operation is required to open the window fully for egress purposes. This additional operation can be performed without the keys, or special tools and the SafeGard™ casement - WOCD will automatically re-latch when the sash is fully closed.

- Easy to field install
- Simple 2 motion activation in the event of an emergency
- Very low chance of "accidental disengagement"
- Can easily be retrofitted with previous versions in the event of service
- Automatically re-engages once the window is closed
- Limits openings to 4" as per the Emergency Escape and Rescue Openings (EERO) requirement of the International Residential Code (IRC 2018)
- Meets all requirements of ASTM F2090
- Operational instruction labels are included for site application to the window
